

The Λ Proof DAO Charter

Foundational Governance Document

Version: 1.0

Effective Date: January 8, 2026

License: CC0 1.0 Universal (Public Domain Dedication)

Preamble

We, the builders and stewards of Λ Proof, establish this Charter to govern the Constitutional Core—the mathematical, ethical, and protocol foundations upon which lawful-by-design computation rests. This DAO exists to ensure that no single entity can control the foundational layer of prime-indexed identity, ethical sovereignty, or recursive lawfulness.^[1]

The Constitutional Core is open; the tools may be owned.

This Charter creates a governance structure that:

- Preserves the public domain status of foundational mathematics
- Enables permissionless innovation on top of the foundation
- Prevents enclosure by any party—including the DAO itself
- Maintains the ethical invariants encoded in the Λ -Constitution

Article I: Purpose & Scope

Section 1.1: Mission Statement

The AProof DAO exists to:

1. **Steward the Constitutional Core** — Maintain and evolve the MTPI, CSL, and protocol specifications as public goods
2. **Prevent Enclosure** — Ensure foundational mathematics remain unpatentable and freely implementable
3. **Enable Ecosystem Growth** — Foster an environment where third parties can build, patent, and commercialize their own implementations
4. **Uphold Ethical Invariants** — Preserve the Conscious Sovereignty Layer (CSL) principles: Neutrality, Beneficence, and Silence
5. **Govern Protocol Evolution** — Manage the MTPI Improvement Proposal (MIP) process for specification changes

Section 1.2: Jurisdictional Scope

The DAO governs exclusively the **Constitutional Core**:^[1]

Layer	Governed	Description
Mathematical Frameworks	✓	MTPI, PIRTM, PETC, DRMM
Ethical Governance	✓	CSL operators, Silence Clause, Λ -Constitution
Protocol Specifications	✓	RootContract, Λ -Archivum, prime-gated activation
Reference Implementations	✓	Open-source circuits, contracts, client libraries
Proprietary Tools	×	Commercial implementations built on AProof
Third-Party Applications	×	Tools built by ecosystem participants

Article II: Constitutional Principles

Section 2.1: The Λ -Constitution

The following principles are **immutable** and may not be amended by any governance process:

ARTICLE 0: PRIME-LAWFUL IDENTITY

Every person bears a right to lawful computation.
Identity is prime-decomposable, self-sovereign, and drift-bounded.
No surveillance shall be required as a condition of participation.

ARTICLE 1: CONSCIOUS SOVEREIGNTY

The CSL operators—Neutrality, Beneficence, Silence—govern all protocol-level decisions. An intent that fails any operator defaults to NO-OP. The system shall do no harm through action or inaction.

ARTICLE 2: SILENCE CLAUSE

When in doubt, do nothing.
No token shall be issued.
No action shall be taken.
An audit event shall be logged.
Silence is the ethical default.

ARTICLE 3: NON-ENCLOSURE COVENANT

The Constitutional Core shall remain in the public domain.
No patent shall be sought on MTPI, CSL, or protocol specifications.
Any party asserting patents against the Constitutional Core forfeits all rights under this Charter.

ARTICLE 4: PERMISSIONLESS INNOVATION

Third parties may freely implement, extend, patent, and commercialize tools built on the Constitutional Core.
The DAO shall never assert rights against such implementations.

Section 2.2: Ethical Operator Definitions

The CSL operators that govern protocol behavior:^[1]

Neutrality (N): An intent is neutral if it does not favor one party over another based on protected attributes. Parameter constraints must be applied uniformly.

Beneficence (B): An intent is beneficial if it does not extract value from users without explicit consent and respects data minimization principles.

Silence (S): If an intent fails any operator check, the system defaults to NO-OP—no token issued, no action taken, audit event logged.

Commutation Invariant: An intent commutes with CSL if N, B, and S all evaluate to true and the order of application does not affect the outcome.

Article III: Governance Structure

Section 3.1: Constitutional Council

The Constitutional Council is the primary governance body:

CONSTITUTIONAL COUNCIL (7-13 Members)
COMPOSITION: • 3 Founding Stewards (initial term: perpetual advisory) • 2 Technical Architects (elected by MIP contributors) • 2 Ecosystem Representatives (elected by certified builders) • 2 Ethics Guardians (appointed by Council supermajority) • 0-4 At-Large Members (elected by token holders)
TERM: 2 years, staggered (half elected annually)
QUORUM: 5 members for standard decisions
SUPERMAJORITY: 2/3 for specification changes

--

Section 3.2: Council Powers

Power	Threshold	Scope
Approve MIPs (minor)	Simple majority	Bug fixes, clarifications
Approve MIPs (major)	Supermajority (2/3)	New features, breaking changes
Amend Charter	Supermajority + 90-day notice	Non-constitutional provisions
Emergency Actions	Unanimous	Security vulnerabilities only
Appoint Ethics Guardians	Supermajority	2-year terms
Veto Patent Pledge Changes	Any single member	Absolute veto

Section 3.3: Working Groups

Specialized working groups operate under Council oversight:

- **Protocol Working Group** — Maintains specification documents and reference implementations
- **Security Working Group** — Conducts audits, manages vulnerability disclosure
- **Certification Working Group** — Develops conformance test suites, certifies implementations
- **Ecosystem Working Group** — Supports third-party builders, manages documentation
- **Ethics Working Group** — Reviews CSL operator definitions, advises on edge cases

Article IV: MTPI Improvement Proposals (MIPs)

Section 4.1: MIP Process

MIP LIFECYCLE

Section 4.2: MIP Categories

Category	Threshold	Examples
MIP-Core	Supermajority	Changes to MTPI formalism, CSL operators
MIP-Protocol	Supermajority	RootContract changes, Λ -Archivum schema
MIP-Interface	Simple majority	API changes, adapter interface updates
MIP-Informational	Simple majority	Best practices, documentation
MIP-Process	Supermajority	Governance process changes

Section 4.3: MIP Template

```
---
MIP: [number]
Title: [descriptive title]
```

Author: [name(s) and contact]
Category: Core | Protocol | Interface | Informational | Process
Status: Draft | Review | Voting | Final | Rejected | Withdrawn
Created: [date]
Requires: [MIP numbers if applicable]

Abstract

[One paragraph summary]

Motivation

[Why is this change needed?]

Specification

[Technical specification of the change]

Rationale

[Design decisions and alternatives considered]

Backwards Compatibility

[Impact on existing implementations]

Security Considerations

[Security implications]

CSL Compliance

[How this change affects Neutrality, Beneficence, Silence]

Reference Implementation

[Link to implementation or pseudocode]

Article V: Patent Pledge Governance

Section 5.1: The Irrevocable Pledge

The DAO maintains the Patent Non-Assertion Pledge as a foundational commitment:^[1]

PATENT NON-ASSERTION PLEDGE

The Δ Proof DAO irrevocably covenants that it will:

1. NEVER patent the Constitutional Core
 - MTPI, PIRTM, PETC, DRMM mathematics
 - CSL operators and Silence Clause
 - RootContract and Δ -Archivum specifications
 - Prime-gated activation protocols
2. NEVER assert patents against implementations of the Constitutional Core, regardless of:
 - Commercial use
 - Proprietary licensing
 - Competition with DAO-affiliated services
3. REQUIRE any assignee or licensee of DAO-developed technology to honor this pledge
4. PUBLISH defensive publications to establish prior art and prevent third-party enclosure

Section 5.2: Pledge Amendment Prohibition

The Patent Pledge may not be amended to reduce scope.

- Any Council member may exercise an absolute veto against pledge modifications
- Pledge scope may only be *expanded* (to cover additional elements)
- Existing pledge recipients retain rights even if they do not adopt expanded terms

Section 5.3: Defensive Termination

The pledge's non-assertion covenant terminates ONLY if a party:

1. Asserts patents against the Constitutional Core itself (not tools built on it)
2. Asserts patents to prevent others from implementing Constitutional Core specifications

Termination is:

- Automatic upon filing of litigation
- Limited to the asserting party (does not affect other pledge recipients)
- Reversible if litigation is withdrawn within 30 days

Article VI: Treasury & Economic Model

Section 6.1: Revenue Sources

The DAO sustains operations through ecosystem services, not patent licensing:^[1]

Revenue Stream	Description	Margin
Certification Fees	Validate implementations as ΛProof-Compatible	80-90%
Enterprise SDKs	Optimized libraries with support contracts	60-70%
Professional Services	Integration, policy design, audits	40-50%
Training Programs	Workshops, certification for developers	70-80%
Managed Λ-Archivum	Hosted audit log with compliance reporting	65-75%

Explicitly Excluded: Patent licensing fees on Constitutional Core

Section 6.2: Treasury Allocation

ANNUAL TREASURY ALLOCATION

Section 6.3: Grant Program

The Ecosystem Grants program funds:

- Reference implementation development
- Documentation and tutorials
- Academic research on MTPI/CSL
- Open-source tools benefiting the ecosystem
- Accessibility and localization efforts

Grant decisions require Protocol Working Group recommendation and Council approval.

Article VII: Dispute Resolution

Section 7.1: Internal Disputes

Disputes among DAO participants follow escalation:

1. **Working Group Resolution** — Informal mediation within relevant WG (7 days)
2. **Council Arbitration** — Formal hearing before Council (14 days)
3. **Ethics Guardian Review** — Final appeal on ethical matters (21 days)

Section 7.2: External Disputes

Disputes with third parties:

1. **Patent Assertion Defense** — Legal Defense Fund activated automatically
2. **Trademark Disputes** — Council authorizes response
3. **Implementation Disputes** — Certification Working Group adjudicates conformance

Section 7.3: Fork Rights

Any party may fork the Constitutional Core at any time:

- All specifications are CC0 (public domain)
 - All reference implementations are Apache 2.0
 - The DAO claims no rights over forks
 - Forks may not use "ΛProof" trademark without permission
-

Article VIII: Membership & Participation

Section 8.1: Membership Classes

Class	Rights	Requirements
Contributor	Submit MIPs, participate in WGs	Merged contribution to repo
Certified Builder	Vote in ecosystem elections	ΛProof-Compatible certification
Council Candidate	Stand for Council election	12 months as Contributor + nomination
Ethics Guardian	CSL interpretation authority	Council supermajority appointment

Section 8.2: Voting Weight

For Council elections and major MIPs:

VOTING WEIGHT FORMULA

```
base_weight = 1 (all members equal base)
contribution_weight = log2(merged_commits + 1) × 0.5
certification_weight = certified_implementations × 0.3
tenure_weight = min(years_active, 5) × 0.2

total_weight = base_weight + contribution_weight +
               certification_weight + tenure_weight
```

Maximum weight cap: 10× base weight (prevents plutocracy)

Section 8.3: Code of Conduct

All participants agree to:

1. Uphold the Λ -Constitution principles
 2. Engage constructively in technical discussions
 3. Respect the non-enclosure covenant
 4. Report security vulnerabilities responsibly
 5. Maintain confidentiality of security-sensitive information
-

Article IX: Amendment Process

Section 9.1: Amendable Provisions

Provision	Amendment Process
Λ-Constitution (Art. II §2.1)	IMMUTABLE — Cannot be amended
Patent Pledge (Art. V)	EXPANSION ONLY — No reduction
Council Structure (Art. III)	Supermajority + 90-day notice
MIP Process (Art. IV)	Supermajority + 60-day notice
Treasury Allocation (Art. VI)	Simple majority
Membership Classes (Art. VIII)	Supermajority

Section 9.2: Amendment Procedure

1. **Proposal** — Any Council member or 10 Contributors may propose
 2. **Notice Period** — Published for community comment (60-90 days)
 3. **Council Vote** — Per threshold in §9.1
 4. **Implementation** — 30-day grace period before effectiveness
-

Article X: Transition & Formation

Section 10.1: Formation Timeline

FORMATION ROADMAP

Month 1-3: Foundation Transparency

- └─ Publish MTPI mathematical framework (arXiv, GitHub)
- └─ Release CSL formalism and Δ -Constitution (CC0)
- └─ Open-source reference circuits and contracts (Apache 2.0)
- └─ Create comprehensive protocol specifications

Month 4-6: Governance Scaffolding

- └─ Appoint Founding Stewards (3 members)
- └─ Establish initial Working Groups
- └─ Launch MIP process (draft)
- └─ Begin community contributor onboarding

Month 7-9: Certification & Ecosystem

- └─ Launch Δ Proof-Compatible certification program
- └─ Create conformance test suites
- └─ Certify first third-party implementations
- └─ Host first community governance call

Month 10-12: DAO Activation

- └─ Formal DAO incorporation (jurisdiction TBD)
- └─ Transfer Constitutional Core stewardship
- └─ Elect first full Constitutional Council
- └─ Ratify final Charter

Section 10.2: Founding Stewards

The Founding Stewards serve as initial governance until the Council is elected:

- **Powers:** All Council powers during transition
- **Term:** Until first Council election (target: Month 12)
- **Post-Transition Role:** Perpetual advisory (non-voting) Council seats
- **Accountability:** Subject to Ethics Guardian review

Section 10.3: Asset Transfer

Upon DAO activation:

1. **Intellectual Property** — Constitutional Core specifications transfer to DAO
 2. **Trademarks** — "ΛProof" mark transfers to DAO
 3. **Infrastructure** — GitHub org, documentation sites transfer
 4. **Treasury** — Initial treasury seeded by Founding Stewards
-

Article XI: Dissolution

Section 11.1: Dissolution Conditions

The DAO may dissolve only if:

1. Council votes unanimously for dissolution, AND
2. 90-day community comment period completes, AND
3. No objection from any Ethics Guardian

Section 11.2: Asset Distribution Upon Dissolution

DISSOLUTION ASSET DISTRIBUTION

1. Constitutional Core → Remains public domain (CC0)
(No change—already irrevocably dedicated)
 2. Reference Implementations → Remain Apache 2.0
(No change—license survives dissolution)
 3. Treasury Assets → Distributed to:
 - a. Outstanding obligations and debts
 - b. Legal defense fund reserves → EFF or similar
 - c. Remaining funds → Ecosystem grants (pro-rata to contributors)
 4. Trademarks → Abandoned to public domain
-

Signatures & Ratification

This Charter becomes effective upon:

- 1. Publication at [designated URL]
- 2. Signature by Founding Stewards
- 3. 30-day community ratification period

FOUNDING STEWARD ATTESTATION

By signing below, we attest that:

"Every person bears a right to lawful computation.
No one shall profit from enclosing the mathematical
foundations of prime-indexed identity, ethical sovereignty,
or recursive lawfulness. We commit to non-exploitative
stewardship, upholding the CSL constraints and prime-
decomposable lawfulness that anchor the Λ -Constitution."

Date: _____

[Founding Steward 1]

Date: _____

[Founding Steward 2]

Date: _____

[Founding Steward 3]

Appendix A: Glossary

Term	Definition
Constitutional Core	The public-domain mathematical, ethical, and protocol foundations
CSL	Conscious Sovereignty Layer—ethical operators governing protocol behavior

MTPI	Meta-Theorem of Prime Identity—foundational identity mathematics
MIP	MTPI Improvement Proposal—formal specification change process
Λ-Archivum	Tamper-evident audit log with Merkle checkpoints
Prime Gate	Temporal activation mechanism based on prime epochs
Drift Bound	Maximum allowable deviation ($\delta \leq 0.3$) before silent mode
Silence Clause	Ethical default: when in doubt, do nothing

Appendix B: Reference Documents

1. Λ -Constitution (Full Text)
2. Patent Non-Assertion Pledge (v1.0)
3. MTPI Mathematical Specification
4. CSL Operator Definitions
5. RootContract Interface Specification
6. Λ -Archivum Data Model
7. Adapter Coordination Interface Specification
8. Defensive Publication Pack (Notes 1-4)

End of Charter

This Charter establishes the governance framework for stewarding Λ Proof as a public good while enabling commercial innovation on top. Would you like me to:

1. **Draft the full Λ -Constitution** as a standalone document?

2. **Create the MIP-0001** (the first MTPI Improvement Proposal establishing the MIP process itself)?
3. **Develop the Certification Program specification?**
4. **Design the voting smart contract** for on-chain governance?

**
